MINUTES OF THE ___House___ COMMITTEE ON ___Computers, Communications&Technology___

The meeting was called to order by ___George Dean___ a
                                    Chairperson

___7:30___ a.m./p̶x̶x̶ on ___April 9___, 19_91_in room ___529-S__ of the Capitol

All members were present except:

Committee staff present:
Norman Furse, Revisor of Statutes
Julian Efird, Research
Diane Duffy, Research
Mary Valdivia, Committee Secretary

Conferees appearing before the committee:

Mr. Jim Kent, Director, Data and Communication services
              Department of Corrections

Meeting called to order at 7:00 AM.

Mr. Jim Kent, Director, Data and Communications Services, Department of Corrections, presented the Committee with the following documents.

Interdepartmental Memorandum dated April 5, 1991, Clarification of the Agency's Position with Reference to DISC Approval of the Implementation of a Distributed Data System Network (Attmt. #1)

Interdepartmental Memorandum dated April 5, 1991, Computer and Communications Technology Committee Request for Multiple Fiscal Year Implementation Plan and attachments (Attm.#2).

Discussion followed on these documents and recommendations to be made by CCT as it pertains to funding for Department of Corrections.

Question raised by Rep. Mead as to whether it was wise at this time to make a recommendation not knowing who the new secretary will be and what the choices will be in this area.

Rep. Kline moved and seconded by Rep. McKechnie, that the Committee recommend funding of Phase I for Central Office in the amount of $576,851 with a proviso the funds will not be released until the next Secretary of Corrections reviews the needs and submits a plan for review to the joint Computer Committee and further provide that after review by joint committee request will be submitted for approval of the State Finance Council for release of funds. Motion passed.

Committee Report was submitted by Subcommittee #1 as it pertained to Legislative Computerization (Attmt. #3).

It was moved by Rep. McKechnie and seconded by Rep. Kline that committee report be adopted.

Rep. Patrick moved that the following be incorporated into the committee report: that the LCC review need for Information Resource Manager as opposed to contracting for a technician to maintain equipment or for consultant working.

Rep. Kline moved that more specific direction on distribution of equipment should be incorporated into report. With these two items incorporated into the report the motion to adopt report passed.

MINUTES OF THE _____House_____ COMMITTEE ON Computers, Communications&Technology

room __529-S__ Statehouse, at __7:00__ a.m./p.m. on _____April 9_____ 19__91__

The report is to be distributed as needed.

It was moved by Rep. Rock and seconded by Rep. McKechnie that minutes of March 29, April 2, April 3 and April 4, 1991, be approved. Motion carried.

Rep. Roper was asked if his subcommittee had prepared a written report making recommendations for funding of KFIS Department of Administration? Rep. Patrick stated that his position was not for changing in any way the House position that went out on the Department of Administration on KFIS.

Discussion followed on Subcommittee's report previously submitted to CCT Committee and the subcommittee's recommendations. Question raised by the Chair as to what dollar amounts should be presented to the Appropriations Committee.

Rep. Patrick stated it would be difficult to present a dollar amount at this time and that recommendations were made to Department of Administration budget that would permit the KIPPS program to adequately survive for FY92. It is a workable solution in light of what was presented the other day and we should just wait until a new Secretary of Administration can come to us and make a FY92 supplemental request.

Motion made by Rep. Roper and seconded by Rep. Patrick to support the House position on Department of Administration computer budget.

The following was read by Rep. Patrick from the House Appropriations Subcommittee on the Department of Administration budget.

"Reduce $733,450 from the State General Fund in the Central Management Systems Operation account and 1.0 FTE position (programmer). The Subcommittee recommends that this amount contained in a separate line item include a proviso that provides for the following: KIPS-- processing and programming ($1,930,55); existing contractual obligations ($652,303); STARS -- processing and programming ($1,494,959; and miscellaneous costs ($224,480). The Subcommittee recognizes that the recommendation does not include costs associated with the upgrade or replacement of the hardware (UNYSYS) on which KIPPS resides. The Subcommittee notes that the Department contracted with Price Waterhouse to provide a "benchmark" study of the KFIS/KAHRS which is to be completed March 15,1991. According to the Secretary of Administration, the Governor will make a recommendation as to which direction the State should take regarding the payroll/personnel system after reviewing the results of the Price Waterhouse study and analyzing the pricing data on the upgrade of the existing payroll/personnel hardware (UNISYS). The Subcommittee believes that the Legislature must carefully review this information as well as the Department's recommendation on KFIS/KAHRS and KFIS/ADPICS as soon as it becomes available so that the Legislature can provide adequate oversight of the policy decisions regarding KFIS."

MINUTES OF THE ____House____ COMMITTEE ON __Computers, Communications&Technology__

room __529-S__ Statehouse, at __7:00__ a.m./p.m. on _____April 9_____, 19__91__

The above should be incorporated into committee's report to Appropriations.

Discussion followed on a $40,000 error which was made on Committee's original recommendation for Department of Administration. Question raised as to how much less this committee was recommending than what was being requested.
Diane Duffy stated that the House recommendation was $4.3 million. Department of Administration came in and talked about $5 million, we deleted a position and deleted $40,000 for DOA connects to get to the $4.302 million. There is some change in numbers that the department is presenting.

The recommendation of the House position is the correct one and there is a $40,000 error. The CCT Committee should incorporate new figures of $4,342,293 as the recommendation for Department of Administration.

Motion made by Rep. Roper and seconded by Rep. Patrick to accept committee report with incorporation of the above. Motion passed.

CCT Committee reports dated April 9, 1991 Legislative Computerization (Attmt. #4), KFIS/KAHRS Project Funding (Attmt. #5), and one dated April 13, 1991, Department of Corrections Computer Funding (Attmt. #6), were presented to the House Appropriations Committee and adopted on April 22, 1991.

Meeting adjourned at 8:10 AM.

KANSAS DEPARTMENT OF CORRECTIONS

INTERDEPARTMENTAL MEMORANDUM

TO: Steven J. Davies, Ph.D., Secretary

FROM: Jim Kent, Director, Data and Communication Services

DATE: April 5, 1991

SUBJECT: Clarification of the Agency's Position with Reference to DISC Approval of the Implementation of a Distributed Data System Network

In accordance with K.S.A. 75-4608, DISC is required to prepare a Kansas Information Management Plan. This plan includes overall statewide goals and plans from each state agency.

The agency plans have two major sections. The first section deals with current information processing activities and functions which support the goals and mission of the agency. The second section contains the plans for new or enhanced applications the agency would like to implement over the next three years. These plans are conceptual and directional in nature. The planning instructions, Attachment A, state specifically that the plans **"should not include details about specific projects. Specific details about projects should be submitted to the Division of the Budget ...with the agency budget document."** They are an analysis of agency information needs and its priorities for meeting those needs.

Once the information plans are accepted by DISC, it is the agency's responsibility to develop detailed plans which serve as the basis for agency budget initiatives in the following fiscal year.

The Department of Corrections submitted an information technology plan to DISC prior to June 30th as required. The plan outlines the agency's move from a centralized to a distributed information system. The CCT Committee has received a copy of this plan. The department has submitted to the legislature a detailed plan for the implementation of the distributed information system.

When the agency receives legislative funding for this project, a detailed request will be submitted to DISC for review and approval. This request will include the needs assessment, projected equipment needs, implementation plan, and hardware/software specifications.

CCT

Attmt #1

FISCAL YEAR 1992
AGENCY PLANNING INSTRUCTIONS
for
INFORMATION MANAGEMENT

Philosophy

During FY90, the focus of the state's planning efforts shifted to the management and utilization of information that is collected and processed in state agencies. Information management is a concept that needs to be addressed for agencies to achieve more effective and efficient service delivery programs, especially in times of limited growth in funding levels.

A basic information processing and communications infrastructure is in place and available to state agencies. In addition, compatibility issues are being addressed with standards now in place which cover connectivity issues, operation and use of the statewide infrastructure. Industry standards will continue to evolve with the introduction of new technology which will require policy decisions to effect the direction of information management in state government. However, the state is positioned to take advantage of new developments in technology in a cost effective manner.

The number of state employees utilizing technology in their jobs will continue to grow with new applications being developed and implemented which automate all or a portion of their work. As this trend continues, it is important that agency managers study the effect of automation on work flow and information processing in their agency to determine the most efficient and cost effective way to collect, share, process, store and retrieve data. The ability of the states' employees to efficiently and effectively perform their duties will depend, in large part, on the ability of managers in state government to effectively manage information technology in connection with processing activities. This can effect all functions of the organization, not just traditional data processing.

Business planning has long been accepted as a basic principle of good management. Strategic business planning is essential to the formulation of effective organizational strategies. Strategic planning for information systems, on the other hand, is less well understood. In part, this is because of the relatively recent use of information technology on an extensive scale in most organizations. In recent years, however, it appears that information is being accepted as a resource that needs to be managed like any other resource, such as money or people. Accordingly, strategic planning for information resources is emerging as a critical management concern.

An agency business plan describes and qualifies the goals and objectives of the agency. It usually details the specific policies and strategies which will be used to accomplish the plan. It is increasingly important that the plan should also describe the information systems required to support the goals and objectives of the agency's business operations.

M E M O R A N D U M

TO: Agency Heads/Data Processing Managers

FROM: Russell Getter, Director
          Division of Information Systems and Communications

DATE: April 19, 1990

SUBJECT: Agency Information Management Planning Instructions

In accordance with K.S.A. 75-4608, DISC is required to prepare the Kansas Information Management Plan. The plan must be approved by the Information Systems Policy Board. The plan includes strategic planning information of statewide interest about information management activities in state government. Agency Information Management Plans are foundation documents for the State Plan and are of interest to both the Executive and Legislative branches of government. Agency plans also become an important consideration for DISC as it determines resource requirements to meet the service needs of its customers.

Attached are the planning instructions for agency Information Management Plans (IMP) for FY92. The instructions include a planning philosophy, an overview of the planning process and a suggested plan outline with some questions to consider as the plan is developed.

The planning process for business planning starts by defining the overall mission of the business. The same process applies to planning for information management. For utilization of information technology in an agency to be most effective, it should be used to support the activities associated with the mission of the agency and incorporated in the agency business plan. This process helps focus attention on agency functions where opportunities for productivity improvements exist in terms of cost avoidance, minimizing duplication of effort and/ or data, and/or providing more effective service levels.

/-3

R - 277

An agency's conceptual plan should be submitted to DISC by June 29, 1990. The plan should include your agency's mission in state government and a narrative description of the information processing functions and activities that support your mission. The plan should identify both processing and communications facilities and services needed through FY94 for new or enhanced applications.

There have been requests for DISC to publish agency plans. Accordingly, an agency should anticipate that its plan will be provided to a large audience. Also, agency omissions, if any, may be noted by those reading the printed compilation.

The tactical level of planning will be addressed in the budget requests for the next fiscal year. For FY92, agencies will likely be asked to submit detailed information about each new project that is included in agency budget requests. Detailed instructions regarding these requests will follow at a later date.

If you have any questions about the planning instructions, please contact Bill McGlasson, Bureau of Information Resource Management. His phone number is 296-2670.

RG41390d

1-4

Planning Instruction Overview

With the FY91 planning instructions, DISC initiated a conceptual planning process which adapts the planning process to conform with the normal budget planning process that is established in state government. The following schedule shows the due dates for the items requested in the planning process for this year.

Agency Information Management Plan
FY92 Planning Process

|	
Conceptual Planning	June 29, 1990
Budget Requests	October 1, 1990
Acquisitions	
Bulk Approvals	
For FY91	June 1, 1990
For FY92	June 1, 1991

The general thrust of agency Information Management Plans should be conceptual and directional in nature. The conceptual agency Information Management Plan (IMP) that is to be submitted to DISC on or before June 29, 1990 should not include details about specific projects. Specific details about projects should be submitted to the Division of the Budget in September, 1990 with the agency budget document. Copies of agency information technology and management budget requests should be submitted to DISC by October 1, 1990 (after the agency has submitted its budget document to the Division of the Budget). It is important that the agency budget request for information technology and management funding is compatible with and provides specific reference to the agency Information Management Plan.

It should be noted, however, that the detail about specific projects that each agency submits to the Division of the Budget, and to DISC, may be presented to the legislature in a document with all other agency information management plans. An indication of plans not received will also be made.

Agency Conceptual Information Management Plan FY 92-94

The agency Information Management Plan (IMP) is intended to identify how information activities and functions will support the agency's mission and goals for the next three years. Information activities include such things as data, communications, optical storage, and video reception and transmission. It is important to view agency information activities and functions from an overall agency perspective in order to identify areas where technology may produce savings in terms of cost avoidance, elimination of duplicated effort, increased utilization of information that is already captured and retrievable, or increase the effectiveness of services provided to the public.

The following is a sample outline which identifies suggested topics to consider in preparing agency information management plans. Under each topic is a brief description of the type of information that should be included in each agency plan.

COMPUTER AND COMMUNICATION TECHNOLOGY COMMITTEE

FY92 PHASE I

April 5, 1991

Presented to Steven J. Davies, PhD, Secretary

Kansas Department of Corrections

Prepared by: Jim Kent, Director, Data and Communication Services

KANSAS DEPARTMENT OF CORRECTIONS

DISTRIBUTED DATA SYSTEM MANAGEMENT PLAN

FY92 PHASE I

The agency is currently redesigning the existing system files running on the AS/400 in central office in order to more fully utilize existing system capabilities. Completing the conversion to fully utilize system capabilities and to insure multi-system compatibility and integrity is critical to effective administration of multiple AS/400s in a distributed data management system.

The design and implementation of the new intake classification application is in process. Step one of the conversion and the design of the new intake program will take place concurrently. Some data is collected at points other than intake, but the new intake program reflects a major change in the process and will require close and careful attention to implement.

CENTRAL OFFICE

The central office AS/400 is the central data bank for the agency. The current model 40 has neither the memory, the power nor the number of available local device controllers that is necessary to begin implementation of a distributed data management system. The agency needs to upgrade the central system to a model 60 operating system. The central office upgrade will allow all central office staff access to inmate tracking programs, wordprocessing, spreadsheet, food distribution, canteen, key inventory and system printing.

Upgrade to Model 60

> 80 mb memory
> 5.0 gb dasdi
> high speed tape drive
> 160 local devices
> Environmental
> Maintenance
>
> Hardware total $334,088
>
> As/400 Office
> DSLO Software License
> CALC 400 (spreadsheet)
>
> Software total $104,000

2-3

Premise Expansion

        100 Baluns
        100 Mod Taps
        Patch Panel Expansion
        Installation
        8 Power Daisy Panels

        Premise total $ 10,513

Peripheral Acquisitions

        43 Terminals
        45 Sets 5250 Emulation
         3 System Laser Printers

        Peripheral total $ 72,362

Personal Computer Software Standardization

        20 Sets Wordperfect 5.1
         5 Sets Lotus
        10 Sets Harvard Graphics

        PC Standardization total $ 9,000

Training

        AS/400 Native
        AS/400 Office
        Personal Computer

        Training total $ 20,000

                Central Office Total $ 549,963

2-4

ASTRA NETWORK

The ASTRA committee has awarded Memorex/Telex the contract for equipment used to access the network, therefore in September of 1991, the agency will need to replace the current equipment its utilizing under a lease agreement by purchasing Memorex/Telex equipment located in six different facilities, one set on-line and one set for backup. My plan calls for seven sets on-line located at the facilities listed below, and four sets to be shared by the seven facilities for backup purposes.

Central Office	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Lansing	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
El Dorado	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Ellsworth	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Hutchinson	1 Terminal	1 Printer
Norton	1 Terminal	1 Printer
TCFC	1 Terminal	1 Printer

ASTRA Total $ 32,560

PAROLE SERVICES

Each regional parole office is currently linked to the central office AS/4000 system using personal computers. This limits the use of these personal computers for other functions within the parole office. I intend to install terminals in place of these personal computers freeing them for other functions, and I plan to place additional personal computers and printers in the regional parole offices for under-equipped staff.

5 Terminals	$ 3,000
5 Printers	$ 3,000
5 Controllers	$ 17,500
5 Personal Computers	$ 10,000
5 Laser Printers	$ 7,500
Training	$ 5,000
20 Sets Wordperfect 5.1	$ 4,500

Parole Services Total $ 50,500

- 3 -

CUSTOM PROGRAMMING & CONTRACT SERVICES

In order for the agency to design and implement a distributed data management system in a timely fashion, temporary consultive and programming services will need to be acquired. There is a state contract in effect which provides the availability of junior programmers, senior programmers and consulting services at competitive fixed rates. The agency will need to take advantage of these services as follows:

Completing the conversion	$150,000
Design & code canteen system	$100,000
Design & code inventory system	$ 25,000
Programming Total	**$ 275,000**

MAINTENANCE

To provide on-site maintenance for all the peripheral equipment in the agency would cost well over $100,000 per year. To contain maintenance costs, the agency will provide on-site maintenance for its system line printers and system laser printers. The remaining equipment will be maintained by the data services staff with major repair work being completed by an authorized service agent.

System line printer maintenance per year	$ 8,475
System laser printer maintenance per year	$ 15,600
Authorized service agent repair work	$ 25,000
Vehicle (Van) for data services	$ 12,500
Tools & equipment for maintenance	$ 2,500
Travel expenses	$ 5,000
Maintenance Total	**$ 69,075**

Training

Training costs for staff located in facilities not previously included total $55,000. Training is calculated at the rate of $100 per person per day, two days for personal computer training and two days for system training. The agency would be able to train 137 staff in the local facilities.

Training Total	**$ 55,000**

COMPUTER AND COMMUNICATION TECHNOLOGY COMMITTEE

FY93 PHASE II

April 5, 1991

Presented to Steven J. Davies, PhD, Secretary

Kansas Department of Corrections

Prepared by: Jim Kent, Director, Data and Communication Services

KANSAS DEPARTMENT OF CORRECTIONS

DISTRIBUTED DATA MANAGEMENT SYSTEM PLAN

FY93 PHASE II

The objective of the agency is to fully integrate each facility by linking multiple AS/400 model 35 minicomputers, located at selected sites across the state, with the AS/400 in the central office. This networking would provide localized operation of custom programs as well as electronic sharing of documents, calendars, and messages between all facilities. Existing line drops would be utilized, all existing equipment would be utilized and distributed license agreements would be available for AS/400 software.

Providing spreadsheet, wordprocessing, custom data reporting and custom applications at the facility level would effectively increase the availability and accuracy of inmate demographics and other data. The ability of management to obtain accurate information in a timely fashion at both the local level and at central office directly affects the agency's planning processes, daily operations, and inmate security.

Facility Program Enhancements $ 50,000

2 -11

LANSING

The installation of an AS/400 model 35 will allow Lansing staff access to inmate tracking programs, wordprocessing, spreadsheet, food distribution, canteen, key inventory and system printing. Lansing staff will be able to exchange messages and documents via the computer system with central office staff and other facilities as well.

COMMITTEE REPORT

April 8, 1991

TO: House Appropriations Committee

FROM: House Committee on Computers, Communications,
               and Technology (CCT)

RE: Legislative Computerization

> INTRODUCTION

Funding of $917,908 was deleted from the Legislature's FY 1992 budget recommended by the Governor for computerizing the Legislature. Financing of the computerization project was deferred until the CCT Committee had an opportunity to review the proposed plan and the funding requested by the LCC.

> RECOMMENDATION

The CCT Committee makes the following recommendations which are summarized in Table 1. These recommendations would provide computers and access to laser printers for all legislative secretaries either in FY 1992 or FY 1993.

1. Appropriate $153,562 in FY 1992 to purchase 36 Apple Macintosh LC desktop computers, 36 laser printers, and other related hardware and software.

2. Appropriate $218,281 in FY 1993 (or a lesser amount if prices continue to decline) to purchase an additional 64 Apple Macintosh LC desktop computers, 16 laser printers, seven file servers, and other related hardware and software.

3. Eliminate the typing pool in Legislative Administrative Services once all secretaries are computerized. Cost savings in FY 1993 would range between $35,000 and $40,000 a year.

For FY 1991, the legislative leadership and several other offices acquired computer technologies they needed, at an estimated cost of $99,843. Since those purchases were made out of budgeted funds, the Committee does not recommend any additional financing for this phase of computerizing the Legislature.

The last phase of computerization would involve individual legislators, and the Committee has not dealt with that phase nor does it make any recommendation at this time.

Difference in Cost Estimates	($106,726)	($557,777)	$218,281	($446,222)
House Leadership/Secretaries	$56,931	$66,881	$100,444	$224,255
Senate Leadership/Secretaries	29,932	66,881	59,511	156,324
Joint Hardware/Other Costs	12,980	19,800	58,327	91,107
Totals	$99,843	$153,562	$218,281	$471,686

3 - 2

> COMMITTEE CONSIDERATION

Needs Assessment

The Committee reviewed the various needs and identified the following areas as important for computerizing the Legislature:

1. Word Processing

2. Calendar and Agenda

3. Constituent Database

4. Bill Status

5. Bill Text

6. E-mail

7. Spreadsheets

Alternatives Considered

The following options were identified by the Committee as alternatives for computerizing the Legislature:

1. Buy memory typewriters for all secretaries.

2. Buy MS-DOS or Apple desktop computers and laser printers for all secretaries.

3. Use two existing and buy two additional System 36 minicomputers to use as servers for all secretaries.

4. Upgrade the DEC VAX minicomputer to use as server for all secretaries.

5. Connect terminals to the DISC mainframe computer to provide all secretaries with word processing and other applications on that computer.

Other Considerations

The Committee did not have time to explore two other possible alternatives, but would suggest that the LCC could look at each option.

First, the Secretary of Corrections has proposed subleasing the legislative computers used by secretaries for six months when the Legislature is not in session. The Secretary proposes to use them for an inmate training program. The CCT Committee believes that this type of proposal, while offering a good use of legislative computers when not needed by its secretaries who work during the session, should be addressed by the LCC since it has significant policy implications.

Second, the Secretary of Corrections has proposed that Correctional Industries make furniture to accommodate the legislative computers. Once again, the CCT Committee believes that this type of

3 - 3

proposal should be reviewed by the LCC since such purchases would not be from the private sector. Furthermore, the LCC did not authorize funding for furniture to accommodate legislative computers and should examine this need which the CCT Committee identified.

> BACKGROUND

Andersen Consulting was engaged by Legislative Administrative Services under the sponsorship of the Legislative Coordinating Council (LCC) to identify information and automation needs and their associated systems implications and develop a strategy for computerizing the Legislature. The following sections are extracted from the Andersen Consulting report, **Kansas Legislature Computerization Study**, August 1990.

CURRENT SYSTEMS

The current systems of the Legislature could be described as "islands of automation." Several of the legislative support groups have successfully automated portions of their areas. The groups have implemented this automation independently and without a coordinated Legislature-wide plan.

INFORMATION AND AUTOMATIC NEEDS

Basic Information and Automation Need: Communications

Currently, legislators communicate with each other and with staff face-to-face, by telephone and through typewritten memos. The current communications process is hampered by telephone tag, reliance on typists to create memos and the delays inherent in distributing paper-based information.

Basic Information and Automation Need: Information Access

Access to information produced within and external to the Legislature will be increasingly important. Most information in the Legislature is only available in paper format, requiring physical distribution and storage. Time spent waiting for paper-based publishing and manual distribution is time spent without required information. With an electronic medium for distributing and sharing available information, information access would be faster, and access to more information would be possible. An example of information needing expanded access in the Legislature is bill status.

Basic Information and Automation Need: Productivity

Legislators and staff need to accomplish a large amount of work in a short time frame. Letters are currently produced using typewriters. More productive ways are needed for creating letters and memos, communicating with other legislators and staff, and accessing required information.

Future Information and Automation Needs

Once the basic needs are met, other information and automation needs of the Legislature can be addressed. The underlying data required to provide this information is available in the Legislature. A systematic method to access

3 - 4

the data across the entire Legislature in a straightforward manner is not currently available.

According to a September 1989 survey of Kansas legislators, increased legislative computerization is needed. Only 23% of the legislators responding indicated that all of their information needs are currently being met. Of the responding legislators, 68% said that they would like to have a State-owned computer or a connection point for their own computer if a legislative network were installed.

The overall goal of this project was to develop a viable, flexible, long-term automation strategy for the Legislature given Kansas' current needs and automation status, existing technology, technology trends, automation trends in state legislatures and existing constraints.

Specific objectives include developing a strategy which:

. Delivers improved information accessibility and sharing.
. Improves operational productivity. Leverages the Legislature's current investment in technology.
. Allows for future demands and new technologies.
. Is focused on cost-effectively providing business solutions rather than providing a specific type or brand of technology.
. Is phased to accommodate budget constraints.
. Minimizes the Legislature's financial, schedule and technological risks.
. Positions the Legislature to meet its evolving information and automation needs.

BENEFITS

Legislatures around the country are increasing their levels of computerization to help manage the increasing volume and complexity of information needed to make decisions. Individual PCs are being integrated via local area networks to enable legislators and legislative staff to communicate and share information. Computer networks are also used to tie together different vendors' equipment to further enhance information availability.

The other benefits of introducing increased computerization in the Legislature fall into these categories:

* Improved communications
* Improved access to information
* Increased productivity
* More informed decision making

IMPROVED COMMUNICATIONS

Electronic Mail

Electronic mail is a method of routing memos, short messages and other documents from one computer to one or more other computers. This method of communication would provide several benefits:

Memos and other messages could be exchanged and reviewed without printing. Therefore, paper costs would be reduced.

* Electronic mail memos could be stored on the computer, which would reduce physical file space requirements.

* Previously stored documents could be attached to electronic mail messages and distributed.

3 - 5

* *Electronic mail systems have effective security. Electronic mail messages could be accessed only by the person to whom the message is addressed. User ID and password codes would be required to access a person's electronic mail.*

* *Distribution lists could be developed for any electronic mail message. This feature would be ideal for communications within a committee, party or the entire Legislature.*

* *Electronic mail would be distributed instantaneously. The addressee would be notified as soon as mail has arrived.*

* *An audit trail of communication can be maintained if desired.*

In summary, electronic mail would allow the Legislature to more efficiently manage the exchange of memos, messages and other documents such as committee minutes, meeting location changes and appointment reminders.

FAX Machines

The Legislature already utilizes FAX machines. An increase in the number of newer generation FAX machines around the capitol would allow increased use of FAX technology, upgrade the readability of documents received by FAX and reduce the walking distance to and from FAX locations in the capitol building. Network-compatible FAX machines would allow users to send and receive FAX documents through a network computer.

IMPROVED ACCESS TO INFORMATION

The automation strategy described in this report would allow authorized legislative personnel to access bill status and other DISC mainframe-based information from any workstation. In addition, the strategy would support the addition of future applications that would allow legislators to access information provided by legislative support functions such as committee minutes and Senate and House calendars and Journals.

INCREASED PRODUCTIVITY

Improved communications and electronic access to information would increase productivity in the Legislature. In addition, desktop computers with word processing and other software would provide productivity improvements throughout the Legislature, especially for personnel currently using typewriters.

The benefits of automated word processing are most significant for repetitive tasks such as filling out forms, typing form letters and corresponding with constituents. Document formatting, merging, spell checking and other features would increase responsiveness and flexibility while saving time.

MORE INFORMED DECISION MAKING

Faster access to an increasing amount of data and the synthesis of information from that data would help legislators and staff make more informed decisions. Computer-based access to and management of facts, statistics and reports would allow legislators and staff to review needed information any hour of the day, whenever they have access to a computer. An integrated automation strategy would provide the opportunity to electronically send and receive communications and documents with other state legislatures and the federal government in the future. Exposure to computer systems could help legislators increase their understanding of and insight into technology-related issues.

FROM: House Committee on Computers, Communications,
            and Technology (CCT)

RE: Legislative Computerization

> INTRODUCTION

Funding of $917,908 was deleted from the Legislature's FY 1992 budget recommended by the Governor for computerizing the Legislature. Financing of the computerization project was deferred until the CCT Committee had an opportunity to review the proposed plan and the funding requested by the LCC.

> RECOMMENDATION

The CCT Committee makes recommendations for FY 1992 and FY 1993 for acquiring legislative computers which are summarized in Table 1. These recommendations would provide computers and access to laser printers for all legislative secretaries either in FY 1992 or FY 1993. The CCT Committee recommends:

1. Appropriate $153,562 in FY 1992 to purchase 36 Apple Macintosh LC desktop computers, 36 laser printers, and other related hardware and software. (The Committee anticipates that each of the legislative leadership offices will assign nine systems in FY 1992, with the offices being the Speaker, the House Minority leader, the President, and the Senate Minority leader.)

2. Appropriate $218,281 in FY 1993 (or a lesser amount if prices continue to decline) to purchase an additional 64 Apple Macintosh LC desktop computers, 16 laser printers, seven file servers, and other related hardware and software.

3. Eliminate the typing pool in Legislative Administrative Services once all secretaries are computerized. Cost savings in FY 1993 would range between $35,000 and $40,000 per year.

4. Review (by the LCC) of the need for an Information Resource Manager as opposed to contracting with outside vendors for maintenance and consultant services.

An integrated automation strategy would provide the opportunity to electronically send and receive communications and documents with other state legislatures and the federal government in the future. Exposure to computer systems could help legislators increase their understanding of and insight into technology-related issues.

4-7

COMMITTEE REPORT

April 9, 1991

TO: House Appropriations Committee

FROM: House Committee on Computers, Communication,
        and Technology (CCT)

RE: KFIS/KAHRS Project Funding

> INTRODUCTION

The House Committee on Computers, Communication, and Technology (CCT) reviewed the Department of Administration's KFIS (Kansas Financial Information Systems) project as requested by the House Appropriations Committee.

> CONCLUSIONS AND RECOMMENDATIONS

The CCT Committee makes the following recommendations on KFIS (Kansas Financial Information Systems):

1. The Committee concludes after reviewing the Price Waterhouse report and other information furnished during committee meetings that it is evident that the State has no choice but to continue the KIPPS payroll and personnel systems on Unisys equipment for at least the next three years. The Committee believes that the KAHRS system development should be "halted" in its entirety and that the Department should start again to improve the state's payroll and personnel system in an orderly and methodical manner. The CCT Committee further:

> 1a. Concurs with the House Appropriations Subcommittee recommendation for FY 1992 data processing expenditures of $4,302,293 million for the Central Management Systems Operations, including $1,640,551 million for the Unisys center to keep operating KIPPS, the current payroll and personnel system.

> 1b. Recommends adding $40,000 for data processing expenditures in FY 1992 as a technical correction to the original amount recommended by the House in H.B. 2049.

2. The Committee supports strengthening the authority of the Secretary of Administration and feels that the Secretary should centralize control over computer acquisitions. Specifically, the Committee believes there should be one individual appointed to oversee all computer purchases and applications.

3. The Committee recommends that an interim committee be charged with providing continued legislative oversight over this project. The Committee strongly supports the provisions of 1991 H.B. 2579, specifically the process which requires state agencies to submit proposed acquisitions to the proposed Joint Committee on Computers and Telecommunications. The Committee believes that passage of this legislation is a critical step in improving legislative oversight over computer projects and avoiding situations such as KFIS. Additionally, the Committee believes that this legislation will aid in alleviating legislative concern over the perceived proliferation of computers.

CCT
4-9-91
Attach #5

> COMMITTEE CONSIDERATION

The Committee reviewed the Department of Administration's recommendations of which direction the State should take regarding the payroll and personnel system. Those recommendations were formulated after the Department reviewed the results of the Price Waterhouse study and after analyzing the pricing information on a hardware upgrade (Unisys) of the existing payroll and personnel system (KIPPS).

A number of proposed new options were discussed with the Committee. The Department indicated two options emerged as the primary ones. The first option has new hardware costs to be repaid over a time span of five years, while the second option has a time span of three years for repayment of new hardware costs.

1. Option 1 has an estimated Unisys center operating cost of $1,846,059 in FY 1992. New equipment costs would total $1,915,601, including hardware payments of $460,541 in FY 1992 and for four subsequent years. Total Central Management Systems Operations would be $5,030,199 under this option.

2. Option 2 has an estimated Unisys center operating cost of $1,864,388 in FY 1992. New equipment costs would total $355,255, including hardware payments of $132,612 in FY 1992 and for two subsequent years. Total Central Management Systems Operations would be $5,048,528 under this option.

In addition, the Committee considered the original recommendation made by the House Appropriations Subcommittee on the Department of Administration:

3. This option has an estimated Unisys center operating cost of $1,640,551 in FY 1992. No purchase of new equipment is included in this option. Total Central Management Systems Operations would be $4,342,293 under this option.

> BACKGROUND

KFIS encompasses three individual software systems: STARS (Statewide Accounting and Reporting System) to replace the old CASK accounting system; ADPICS (Advanced Purchasing and Inventory Control System) to support the Division of Purchases; and KAHRS (Kansas Automated Human Resource System) to replace the KIPPS personnel/payroll system.

In regard to the financing of KFIS, the Division of Purchases was approved a total of $371,828 in FY 1988 and FY 1989 from the State General Fund for acquiring a purchasing system and the Division of Personnel Services was approved expenditures of $350,000 from the Central Management Systems Operations Account (SGF) in FY 1989 for a personnel package to replace KIPPS. The phaseout of KIPPS and CASK and the acquisition of the new systems also was to involve the phaseout of the Unisys mainframe computer center and the transfer of these applications to the IBM compatible center.

5 - 2

During the 1990 Session, the Department appeared before the Legislature and discussed the KFIS project, but did not request additional funding for the KFIS project beyond the existing level of appropriation in the Central Management Systems Operations account ($3,478,209). At that time, the Department testified that the KFIS project could be implemented over the next couple of years as long as this annual level of funding was sustained.

The State contracted with Peat Marwick Main for software (accounting and purchasing) and management services for the entire project. Peat Marwick subcontracted with Integral Systems Inc. for the personnel/payroll (KAHRS) system. In addition to the contract with Peat Marwick (total financed obligation of $3,719,446), the Department engaged Business Information Technology (total financed obligation of $1,423,367) for programming work on KAHRS. STARS was implemented February, 1990, and is the accounting system of record. As of January, 1991 the project was substantially over budget and behind schedule. At the recommendation of the acting Secretary of Administration, all development of KAHRS and ADPICS was halted.

In 1991, the Department contracted with Price Waterhouse to conduct a "benchmark" study of KAHRS and submitted a request for information to gather pricing data on upgrading the Unisys center where KIPPS resides. The study was completed March 15. The Price Waterhouse consultants reported to the Committee the following:

* The State has a problem with KAHRS. According to the Price Waterhouse consultant report, KAHARS is approximately 38-40 percent completed. Among the problems, the consultants emphasized that no needs assessment was conducted prior to implementation of the project and no systems methodology was used. The consultants told the Committee that it is unlikely KAHRS, as the project was conducted, would meet the human resource needs of the State.

* Despite the many problems, the State should continue to improve its human resource system.

* The State must proceed differently than it did with KAHRS. The State needs to use an approved implementation methodology; consultants may be useful, but state employees must be more involved; more attention must be given to the management structure of the project; consensus as to the "technical platform"; and a requirements definition must be developed.

The Price Waterhouse report concludes that the State should continue with a payroll/personnel initiative and believes that there are two viable alternatives: (1) upgrade of the Unisys data center followed by an effort to enhance the capabilities of the Unisys data center followed by an effort to enhance the capabilities of the KIPPS system; or, (2) implement a new human resource system using the IBM platform; evaluate the use of an existing software package, data base management systems and the reengineering of existing software. The results of the evaluation could be the recommendation that the KAHRS system be continued.

5 -3

COMMITTEE REPORT

April 11, 1991

TO: House Appropriations Committee

FROM: House Committee on Computers, Communication, and Technology (CCT)

RE: Department of Corrections Computer Funding

> INTRODUCTION

The House Committee on Computers, Communication, and Technology (CCT) reviewed, as requested by the House Appropriations Committee, the Department of Corrections proposal for a computer expansion project . The Appropriations Committee deleted $888,073 for the KDOC computer project, pending a recommendation by the CCT Committee.

> CONCLUSIONS AND RECOMMENDATIONS

The CCT Committee makes the following recommendations on the DOC computer expansion project:

1. Add $576,851 for FY 1992 to begin expanding the DOC computer system for the Central Office only. The estimated total multiyear cost of phase I would be $1,151,491.

2. Make this appropriation subject to release by the State Finance Council, after the following steps have been completed:

> 2a. Consideration of this project by the next Secretary of Corrections and submission of the request by the next Secretary to an interim committee designated by the LCC.

> 2b. Review by an interim committee of the computer expansion project requested by the next Secretary prior to action by the State Finance Council.

Phase II in FY 1993 would cost $311,221 to bring the regional institutions into the computer network. The estimated total multiyear cost of phase II would be $1,136,927. Total estimated costs for phase I and phase II would be $2,288,418.

> COMMITTEE CONSIDERATION

The Committee reviewed the Department of Correction's proposed computer expansion estimated at $888,073 in FY 1992, with an estimated five-year costs of $1,996,138, excluding interest which is estimated at an additional $292,283, or a total cost of $2,288,418. This plan would include $1,472,063 to be financed through KDFA for five years, with an annual repayment cost of $363,998. FY 1992 expenditures would include $363,998 for the first repayment installment, and would include $524,075 of annual operating costs. The original plan included connecting the Central Office and the regional institutions within the same fiscal year.

1

The Committee requested the Department to prepare a phase-in plan in which the Central Office would be included in phase I and the regional institutions would be included in phase II. The phase-in proposal would cost $576,851 in FY 1992, including $424,072 in operating costs and $152,779 for the first installment of repaying KDFA a total of $608,023 in principal plus an estimated $119,396 in interest, for a total of $727,419 for phase I KDFA payments. Phase II in FY 1993 would cost $311,221 to bring the regional institutions into the computer network, including $100,000 in operating costs and $211,221 for the first installment of repaying KDFA a total of $864,040 in principal, plus an estimated $172,887 in interest, for a total of $1,036,927 for phase II KDFA payments.

> BACKGROUND

The Committee received the following documents from the Department which provided information about the proposal and answers to questions raised by the Committee:

1. Kansas Department of Corrections (KDOC) Computer and Communication Technology Committee briefing paper on managing information needs, April 2, 1991.

2. KDOC report on distributed data management system plan,
March 27, 1991.

3. KDOC report on computer and communication technology committee request for a phase-in plan, April 3, 1991.

4. KDOC report on Data Systems International comments concerning DOC computer systems, April 3, 1991.

5. KDOC PERT chart, April 3, 1991.

6. FY 1989 DISC information pertaining to reviews, April 3, 1991.

7. KDOC Information Technology Plan for FY 1992.

8. KDOC preinstallation events and activities for computer system enhancements, April 4, 1991.

9. KDOC clarification of the agency's position with reference to DISC approval for the implementation of a distributed data systems network, April 5, 1991.

10. KDOC response to CCT Committee request for multiple fiscal year implementation plan: Phase I (FY 1992) and Phase II (FY 1993), April 5, 1991. **These documents are Attachment 1.**

KANSAS DEPARTMENT OF CORRECTIONS

INTERDEPARTMENTAL MEMORANDUM

TO: Steven J. Davies, Ph.D., Secretary

FROM: Jim Kent, Director, Data and Communication Services

DATE: April 5, 1991

SUBJECT: Computer and Communications Technology Committee Request for Multiple Fiscal Year Implementation Plan

Attached are the implementation plans detailing the acquisition and installation of the necessary equipment for the distributed data system network over two fiscal years, FY92 and FY93.

Also provided are updated Gantt charts corresponding to each fiscal year.

6-4

KANSAS DEPARTMENT OF CORRECTIONS

DISTRIBUTED DATA SYSTEM MANAGEMENT PLAN

FY92 PHASE I

The agency is currently redesigning the existing system files running on the AS/400 in central office in order to more fully utilize existing system capabilities. Completing the conversion to fully utilize system capabilities and to insure multi-system compatibility and integrity is critical to effective administration of multiple AS/400s in a distributed data management system.

The design and implementation of the new intake classification application is in process. Step one of the conversion and the design of the new intake program will take place concurrently. Some data is collected at points other than intake, but the new intake program reflects a major change in the process and will require close and careful attention to implement.

CENTRAL OFFICE

The central office AS/400 is the central data bank for the agency. The current model 40 has neither the memory, the power nor the number of available local device controllers that is necessary to begin implementation of a distributed data management system. The agency needs to upgrade the central system to a model 60 operating system. The central office upgrade will allow all central office staff access to inmate tracking programs, wordprocessing, spreadsheet, food distribution, canteen, key inventory and system printing.

Upgrade to Model 60

        80 mb memory
        5.0 gb dasdi
        high speed tape drive
        160 local devices
        Environmental
        Maintenance

        Hardware total $334,088

        As/400 Office
        DSLO Software License
        CALC 400 (spreadsheet)

        Software total $104,000

6 - 5

Premise Expansion

        100 Baluns
        100 Mod Taps
        Patch Panel Expansion
        Installation
        8 Power Daisy Panels

        Premise total $ 10,513

Peripheral Acquisitions

        43 Terminals
        45 Sets 5250 Emulation
         3 System Laser Printers

        Peripheral total $ 72,362

Personal Computer Software Standardization

        20 Sets Wordperfect 5.1
         5 Sets Lotus
        10 Sets Harvard Graphics

        PC Standardization total $ 9,000

Training

        AS/400 Native
        AS/400 Office
        Personal Computer

        Training total $ 20,000

                    Central Office Total $ 549,963

ASTRA NETWORK

The ASTRA committee has awarded Memorex/Telex the contract for equipment used to access the network, therefore in September of 1991, the agency will need to replace the current equipment its utilizing under a lease agreement by purchasing Memorex/Telex equipment located in six different facilities, one set on-line and one set for backup. My plan calls for seven sets on-line located at the facilities listed below, and four sets to be shared by the seven facilities for backup purposes.

Central Office	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Lansing	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
El Dorado	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Ellsworth	1 Terminal	1 Printer
Backup	1 Terminal	1 Printer
Hutchinson	1 Terminal	1 Printer
Norton	1 Terminal	1 Printer
TCFC	1 Terminal	1 Printer

ASTRA Total $ 32,560

PAROLE SERVICES

Each regional parole office is currently linked to the central office AS/4000 system using personal computers. This limits the use of these personal computers for other functions within the parole office. I intend to install terminals in place of these personal computers freeing them for other functions, and I plan to place additional personal computers and printers in the regional parole offices for under-equipped staff.

5 Terminals	$ 3,000
5 Printers	$ 3,000
5 Controllers	$ 17,500
5 Personal Computers	$ 10,000
5 Laser Printers	$ 7,500
Training	$ 5,000
20 Sets Wordperfect 5.1	$ 4,500

Parole Services Total $ 50,500

6-7

CUSTOM PROGRAMMING & CONTRACT SERVICES

In order for the agency to design and implement a distributed data management system in a timely fashion, temporary consultive and programming services will need to be acquired. There is a state contract in effect which provides the availability of junior programmers, senior programmers and consulting services at competitive fixed rates. The agency will need to take advantage of these services as follows:

Completing the conversion	$150,000
Design & code canteen system	$100,000
Design & code inventory system	$ 25,000
Programming Total	**$ 275,000**

MAINTENANCE

To provide on-site maintenance for all the peripheral equipment in the agency would cost well over $100,000 per year. To contain maintenance costs, the agency will provide on-site maintenance for its system line printers and system laser printers. The remaining equipment will be maintained by the data services staff with major repair work being completed by an authorized service agent.

System line printer maintenance per year	$ 8,475
System laser printer maintenance per year	$ 15,600
Authorized service agent repair work	$ 25,000
Vehicle (Van) for data services	$ 12,500
Tools & equipment for maintenance	$ 2,500
Travel expenses	$ 5,000
Maintenance Total	**$ 69,075**

Training

Training costs for staff located in facilities not previously included total $55,000. Training is calculated at the rate of $100 per person per day, two days for personal computer training and two days for system training. The agency would be able to train 137 staff in the local facilities.

Training Total	**$ 55,000**

COMPUTER AND COMMUNICATION TECHNOLOGY COMMITTEE

FY93 PHASE II

April 5, 1991

Presented to Steven J. Davies, PhD, Secretary

Kansas Department of Corrections

Prepared by: Jim Kent, Director, Data and Communication Services

6-12

KANSAS DEPARTMENT OF CORRECTIONS

DISTRIBUTED DATA MANAGEMENT SYSTEM PLAN

FY93 PHASE II

The objective of the agency is to fully integrate each facility by linking multiple AS/400 model 35 minicomputers, located at selected sites across the state, with the AS/400 in the central office. This networking would provide localized operation of custom programs as well as electronic sharing of documents, calendars, and messages between all facilities. Existing line drops would be utilized, all existing equipment would be utilized and distributed license agreements would be available for AS/400 software.

Providing spreadsheet, wordprocessing, custom data reporting and custom applications at the facility level would effectively increase the availability and accuracy of inmate demographics and other data. The ability of management to obtain accurate information in a timely fashion at both the local level and at central office directly affects the agency's planning processes, daily operations, and inmate security.

Facility Program Enhancements $ 50,000

6 - 73

LANSING

The installation of an AS/400 model 35 will allow Lansing staff access to inmate tracking programs, wordprocessing, spreadsheet, food distribution, canteen, key inventory and system printing. Lansing staff will be able to exchange messages and documents via the computer system with central office staff and other facilities as well.

AS/400 Model 35

           80 local devices
           Environmental
           Maintenance

           Hardware total $114,000

6-16

TOPEKA CORRECTIONAL FACILITY - Central

The installation of an AS/400 model 35 at TCFC will allow the agency to centralize the entire facility onto a single operating system rather than the current configuration which has part of the staff utilizing the AS/400 model 20, and part of the staff utilizing the central office computer. The AS/400 model 35 will provide TCFC staff access to inmate tracking programs, wordprocessing, spreadsheet, food distribution, canteen, key inventory and system printing. TCFC staff will be able to exchange messages and documents via the computer system with central office staff and other facilities as well.

AS/400 Model 35

        80 local devices
        Environmental
        Maintenance

        Hardware total $114,000
