

Approved: Carl Dean Holmes
Date 2-3-99

MINUTES OF THE HOUSE COMMITTEE ON UTILITIES.

The meeting was called to order by Vice-Chairman Rep. Tom Sloan at 9:05 a.m. on January 28, 1999 in Room 522-S of the Capitol.

All members were present except: Rep. Cliff Franklin

Committee staff present: Lynne Holt, Legislative Research Department
Mary Torrence, Revisor of Statutes
Jo Cook-Whitmore, Committee Secretary

Conferees appearing before the committee: Earl Watkins, Sunflower Electric Power Corp.
Scott Keith, UtiliCorp United, Inc.
Bill Dowling, Midwest Energy
Bruce Graham, KEPCo
Whitney Damron, Empire District Electric Co.

Others attending: See Attached List

Vice-Chairman Sloan introduced Earl Watkins, General Counsel of Sunflower Electric Power Corporation, who presented a report on the Sunflower-Midwest Energy-UtiliCorp Agreement and on Sunflower Electric's generation and transmission issues (Attachments 1, 2 & 3). He concluded his presentation by responding to questions from the committee.

Vice-Chairman Sloan then acknowledged Scott Keith, Director of Electric Rates for UtiliCorp United. He presented a brief overview of UtiliCorp's position on the UtiliCorp United/Sunflower Electric Capacity Agreement. (Attachment 4) He concluded his presentation by responding to questions from the committee.

The Vice-Chair then acknowledged Mr. Bill Dowling, Vice President of Energy Management and Supply for Midwest Energy of Hays. Mr. Dowling reiterated many of the statements presented by Mr. Watkins of Sunflower and Mr. Keith of UtiliCorp. He explained that the new agreement will allow them access to resources within the region at prices close to market conditions. Pending approval from the KCC, they intend to extend the rates used on the main part of the system to those in the Great Plains area and put all customers on a common rate schedule that will result in some rate reduction in the four counties of the Great Plains area. He concluded his presentation by responding to questions from the committee.

Mr. Dowling explained the definition of an "all requirements contract" to be whatever the customers needs are will come under the one contract.

Rep. Holmes questioned Mr. Watkins about problems Sunflower had had in the past. Specifically about the percentage of the plant not allowed by the KCC in rate-base. Mr. Watkins explained about the building of the Holcomb plant during the 1970's and about the influences of the world's oil and natural gas situations. During the first rate case they were given 47% of the plant for rate-base, the following year receiving an additional 10%. Sunflower subsequently went through a debt restructuring in the 1980's. Since that time Sunflower has not been involved in a rate case. When asked to characterize the rates at the retail level in Western Kansas compared to the rest of the state, Mr. Watkins explained it is higher due to a combination of things. The 1997 rates were at 64 mills (i.e. 6.4/kw). At the completion of the proposed Sunflower-UtiliCorp agreement, rates should be down to 47 to 48 mills range. Retail rates are a little higher, in part, due to Sunflower having 1.4 customers per mile of line, whereas in Wichita there could be 60 customers per mile of line.

Additional questions were fielded by Mr. Watkins, Mr. Keith and Mr. Dowling from the committee.

The Vice-Chair then introduced Bruce Graham, Vice President of Member Services & External Affairs for Kansas Electric Power Cooperative, Inc., who made a presentation of KEPCo's capacity planning efforts (Attachment 5).

CONTINUATION SHEET

MINUTES OF THE HOUSE COMMITTEE ON UTILITIES, Room 522-S, Statehouse, at 9:05 a.m on January 28, 1999.

Mr. Graham fielded questions regarding KEPCo's backloaded debts and rate restructuring. Mr. Graham explained that KEPCo had just gone through a rate reduction on December 30, 1998 and answered questions about the rate reduction.

The Vice-Chair then acknowledged Whitney Damron, appearing for the Empire District Electric Company, who presented a copy of a recent press release announcing Empire's construction of a 350 MW addition to their state line power plant (Attachment 6). He concluded his presentation by responding to questions from the committee.

The Vice-Chair directed the committee's attention to the Docket Calendar provided by the Kansas Corporation Commission as requested (Attachment 7).

The Chair then opened the floor for debate on **HB 2053-relating to lighting standards for public buildings**. There being none, the Chair asked for a motion. Rep. Alldritt moved that the committee report **HB 2053** favorable for passage. Rep. Dahl seconded the motion. Motion carried.

The Chair then opened the debate on **HB 2056-application fees for interexchange telecommunication service providers**. Rep. Sloan pointed out that line 37 needed to have the word 'a' changed to 'an'. Rep. Klein moved to strike \$100 and replace it with \$250 on line 37. Second by Rep. Dreher. Motion carried. Rep. Sloan moved to correct the third word on line 37 from 'a' to 'an'. Second by Rep. Loyd. Motion carried. Rep. Alldritt moved that the committee report **HB 2056** as favorable as amended. Rep. Johnson seconded the motion. Motion carried.

Chairman Holmes asked the committee who had not yet carried a bill. Three members had not yet carried a bill. Rep. Margaret Long will carry **HB 2056** and Rep. Ward Loyd will carry **HB 2053**. The Chair said he would hold up action on **HB 2057** as there is another bill coming down that will effect the siting act.

Meeting adjourned at 10:25 a.m.

Next meeting is Friday, January 29.

**TESTIMONY SUBMITTED
TO THE
SENATE AND HOUSE UTILITIES' COMMITTEE**

**By
Mr. Earl Watkins, General Counsel
SUNFLOWER ELECTRIC POWER CORPORATION**

January 28, 1999

First let me thank the Chairman and members of this Committee for providing Sunflower time to share our thoughts with you on our recently executed agreements with Utilicorp United and Midwest Energy as well as Sunflower's comments regarding the adequacy of electric generation in Kansas.

My name is Earl Watkins. I serve as Sunflower's legal counsel and have done so for more than 20 years. As most of you know, we were organized in 1957 to provide reliable wholesale power to the six rural electric cooperatives that own Sunflower. They serve approximately 150,000 consumers in 34 western Kansas counties. Since that time, we have built or acquired more than 1,000 miles of high-voltage transmission lines, and have built five power plants with a total generating capacity of approximately 580 megawatts.

First of all, I would like to comment on the issue of the two new agreements Sunflower recently entered into that are included with Sunflower's recent filing to the Kansas Corporation Commission on January 5, 1999.

With a common vision of reliability for our electric consumers, and a concern for the pressures on the Kansas economy, Sunflower and UtiliCorp recently signed agreements for the sale of power and energy from Sunflower to UtiliCorp.

HOUSE UTILITIES

L. Earl Watkins Jr. testimony before the Senate and House Utilities' Committee
January 28, 1999

Page 2

Among other things, the transaction provides for the purchase of capacity and related transmission services for UtiliCorp's system requirements. The associated energy will be produced from Sunflower's S-2, S-4 and S-5 generating units located in Garden City, Kansas. The initial term of this agreement continues until May 2002. However, Sunflower can extend the initial term through May 2005.

The Sunflower-Utilicorp agreements prescribe procedures for energy generation and marketing between the utilities. In addition, the agreements provide for a joint marketing effort between the utilities for additional energy available from the S-2 unit through May 2002.

To prepare for this increased use of its generating facilities in Garden City, Sunflower is completing a major upgrade and re-commissioning of its 90 megawatt S-2 generating unit. We are also making substantial improvements to our smaller S-4 and S-5 generators. These units each have the capacity to generate approximately 55 megawatts of electricity and are used routinely throughout the year.

As Chris Hauck, Sunflower's President and CEO said, "This landmark agreement shows how Sunflower can work with partners like UtiliCorp to utilize our assets to their fullest extent. It also helps us continue our mission to provide a reliable, affordable power supply to the Member cooperatives who own us and direct our activities for the benefit of the rural electric consumers of western Kansas."

Let me move on to describe the highlights of another agreement recently agreed to by the Sunflower Board and Midwest Energy.

The changing landscape of the electric utility industry led our two rural utilities to agree to replace the existing power supply contract with a new seven-year agreement designed to provide both of us with more flexibility to serve our customers.

Sunflower first provided power to a portion of the Midwest Energy system through an all-requirements power contract in place when they acquired the assets of the Colby-based Great Plains Electric Cooperative in 1988. Since that acquisition, Midwest Energy has discussed with Sunflower ways to modify the terms of that contract to recognize the fact that Midwest Energy is not a Member of Sunflower.

Under the terms of the new agreement, Midwest Energy will purchase power from Sunflower through a new seven-year System Participation Agreement. Provisions for transmission services between the utilities are also included in the new contract that can be renewed for one-year periods after the initial seven-year term.

The transaction also includes a Resolution Agreement that settles all outstanding issues between Midwest Energy and Sunflower. These issues include interventions by both utilities in several dockets currently under the review of the KCC and the Kansas Court of Appeals.

Sunflower recently filed an application with the KCC for the approval of these new agreements. If approved, the new contracts will result in lower rates to Sunflower's six Member cooperatives and provide for the changes proposed in the Midwest Energy contract.

L. Earl Watkins Jr. testimony before the Senate and House Utilities' Committee
January 28, 1999
Page 4

With regard to the Midwest Energy contract, Sunflower believes the new agreement clears up all of our outstanding issues and sets the stage for a new era of mutual cooperation between Sunflower and Midwest. Without a doubt, the real winners in this agreement are the people of western Kansas.

Sunflower believes that with the support of all the parties involved, approval of the package by the KCC can be expected by March 1, 1999. Sunflower is also asking for approval of these agreements from the USDA's Rural Utilities Service (RUS). Both regulatory approvals must be received before the transaction can be implemented between the utilities.

Last of all, I would like to briefly comment on the status Sunflower's generation and transmission resources and planning practices.

Sunflower is a member of the Mid-Continent Area Power Pool's (MAPP) Regional Transmission Council. We are also a member of the Southwest Power Pool reliability council. Through membership in these organizations, Sunflower is intimately involved in regional generation and transmission planning.

Sunflower's transmission system is connected to the Nebraska Public Power District near McCook, Nebraska by a 345 kV interconnection. We are also interconnected to Utilicorp (WestPlains Energy) by a 115kV and 345/230 kV interconnection and to Midwest Energy by five 115 kV interconnections. These interconnections allow Sunflower to access the resources of both the MAPP and SPP.

Many of you may have heard about a new transmission line project recently announced by New Century Energies (NCE). Although regulatory approvals are pending, Sunflower is working with NCE to bring about completion of this important new project. When completed, a new 345kV transmission line will stretch from Amarillo, Texas to Holcomb Station, then west to Lamar, Colorado. In Colorado, the line will terminate at a 210 MW AC-DC-AC converter station. Not many other details are available at this time, however when completed this line will bring a valuable new resource to Kansas.

Sunflower has a variety of generating resources to meet its load requirements. We own three gas turbines that are used for meeting our peak loads. The S-3 unit is a 13 MW General Electric Frame 5 combustion turbine and was placed in service in 1973. S-3 is designated as Sunflower's "black start" unit. This means that this unit would be used to electrically energize the Sunflower system should a catastrophic event occur and the Sunflower system experienced a total loss of electrical power.

Sunflower's S-4 and S-5 units are GE Frame 7 combustion turbines placed in service in 1976 and 1979. These units have a generating capacity of 57 MW and 55 MW, respectively.

Sunflower's S-2 is a gas-fired steam unit that was placed in service in 1973. This unit was placed in a "cold standby" service condition in 1984 after Sunflower's Holcomb Station generating unit was placed into commercial operation. The S-2 unit is currently being reconditioned to return to active service beginning April 1999 with an anticipated rating of approximately 95 MW. Load growth in the Sunflower system, wholesale electric power market volatility as result of 1998 summer market conditions, and market sales opportunities make the this return to service

necessary. The S-2 unit and the three combustion turbines, all located in Garden City, and have a total generating capacity of 220 megawatts.

Holcomb Station, our baseload, coal-fired steam turbine, was put into commercial service in August 1983 with a rating of 296 megawatts. The unit was subsequently re-rated to 325 MW and later to 331 MW. Significant advances in turbine blade technology allowed Sunflower to upgrade the rating of the Holcomb unit to 360 MW in the fall of 1997. When our request for permit updates is approved by KDHE the unit's new rating will be approximately 370 MW.

Finally, in addition to our own generating units, Sunflower has access to municipal generating resources of 29 MW. These resources are contractually claimed by Sunflower as accredited generating capacity.

In 1998, our summer peak was 389 MW. With reserve requirements, our total system capacity responsibility was 449 MW. Given these facts and known new loads, we predict our 1999 summer peak will be 405 MW and our system capacity responsibility will be 467 MW, other things remaining constant.

I share this information with the Committee so you might have a better understanding of Sunflower. These facilities were built because western Kansans did not enjoy reliable service in the past. Brownouts, blackouts, and voltage problems were an everyday fact of life until today's Sunflower system was built. That is not the case today.

Sunflower's mission is to provide reliable electric power to its western Kansas consumers. Reliable and affordable electric power will be even more crucial in the

L. Earl Watkins Jr. testimony before the Senate and House Utilities' Committee
January 28, 1999
Page 7

future especially in light of last summer's price spikes which saw electric power selling for nearly \$10,000 a megawatt hour. That is \$10.00 a kWh, more than 100 times what the average residential customer might pay. The Sunflower Board and management are working closely with regional utilities and power pools to make sure that the previously mentioned price spikes and rolling blackouts similar to those seen in the Denver area last summer never happen to Kansas customers.

Thank you for the time to share our views with the Committee. I would be happy to answer any questions.

ATTACHMENT 4

Kansas Electric Power Cooperative, Inc.

A Touchstone EnergySM Partner 

KEPCo's Power Supply Resources and Planning

Bruce Graham, Vice President, Member Services & External Affairs

Prepared for the House Utilities Committee -- January 26, 1999

Kansas Electric Power Cooperative (KEPCo) provides wholesale generation and transmission service to 21 rural electric distribution cooperatives which serve approximately 100,000 meters covering two-thirds of rural Kansas (see map below).

KEPCo constantly conducts power supply planning and contract reviews. KEPCo also compiles regular Power Requirement Studies for its member distribution cooperatives which are required by the USDA's Rural Utilities Service along with an aggregate study for itself. KEPCo's most recent study projects steady but less than dramatic sales growth of 1.5 percent annually.

KEPCo's demand peaked at 341 MW in June 1998. KEPCo meets the needs of its members through a combination of plant ownership, long-term contracts for hydropower allocations and through contracts from other utilities in the region. KEPCo's generation specifics:

- 71 MW From Wolf Creek Generating Station, KEPCo owns six percent of the plant
- 114 MW Hydropower allocations from the Southwestern Power Administration and the Western Area Power Administration
- Other Purchases under contract from Western Resources, KCP&L, Empire District Electric, Utilicorp United and Sunflower Electric

To simplify, consider KEPCo's Wolf Creek ownership and hydropower allocations as its baseload capacity and the other utility contracts as meeting KEPCo's needs according to customer demand. For KEPCo to meet the needs of its members and their customers, other utilities must fulfill their power supply obligations and contracts to KEPCo and, of course, plan appropriately for future generation. KEPCo works closely with those utilities to forecast and communicate demand in order to enable proper planning by the utilities.

KEPCo member cooperatives serve two-thirds of rural Kansas.

- MEMORANDUM -

TO: The Honorable Carl Holmes, Chairman
And Members Of The
House Utilities Committee

FROM: Whitney B. Damron
On Behalf Of
The Empire District Electric Company

RE: Electric Generating Capacity; Empire

DATE: January 26, 1999

Pursuant to your Committees' interest in present and future generating capacity of electric utilities serving Kansas, attached to this cover page you will find a copy of a recent press release for the Empire District Electric Company concerning additional generation considerations.

Please contact me if you have any specific questions regarding Empire and I will see that your inquiries are addressed promptly. Thank you.

**THE EMPIRE DISTRICT ELECTRIC COMPANY
WILL CONSTRUCT A 350 MW ADDITION
AT THE STATE LINE POWER PLANT**

The Empire District Electric Company has announced plans for the construction of an additional 350 megawatts of electric power generation at its State Line Power Plant located on the Missouri side of State Line Road between Joplin, Missouri and Galena, Kansas.

The State Line Power Plant now consists of a 101 MW simple cycle combustion turbine and a 150 MW simple cycle combustion turbine. Empire will add an additional 150 MW combustion turbine. This new turbine, together with the Company's existing 150 MW combustion turbine (State Line Unit 2), will be used as a heat source to power an additional 200 MW of steam-powered combined cycle generation. After completion, the site will contain a 500 MW combined cycle unit and a 101 MW simple cycle combustion turbine.

It is estimated that the construction of the combined cycle generation plant will begin in the fall of 1999 and that the unit will be commercial by June of 2001. The Company solicited proposals for participants in the combined cycle plant, and is currently finalizing negotiations with another participant such that Empire will own 60% of the 500 MW combined cycle unit.

Expiring purchase power contracts and continued growth in Empire's service territory drove the need for the unit. After a thorough evaluation of Empire's needs in the year 2001 and beyond, and considering the state of the electric energy supply in our region, Empire has determined that this construction project is the most appropriate action to ensure our customers reliable, economical energy. Upon completion, the State Line combined-cycle unit will be one of the most energy-efficient plants in the United States.

Empire has made application under the Kansas generation siting act statues in Docket number 99-EPDE-416-EGF.

The Empire District Electric Company is an investor-owned utility supply electric service to approximately 143,000 customers in a 10,000 square-mile area in southwest Missouri, southeast Kansas, northeast Oklahoma and northwest Arkansas. The Company also provides water service in three incorporated communities in Missouri.
