Senate Public Health & Welfare Committee

SB 6 Secretary of Health restrictions

Written Only : Proponent

Beth Regehr rural Reno county

My testimony is one of complacency. I had no idea the government control could be so devastating to our community but was pleasantly encouraged by the resiliency of our church displayed during the covid pandemic. Rural families experienced mild cases of viral infection and led lives as close to normal of any in the population. City families were better served by faith based entities, and experienced inconveniences but displayed mild infection compared to the national outbreak in large urban areas. Every member of my family has contracted some form of the virus, and lived to tell of their recovery. Unfortunately, the vaccinated are now displaying heart irregularities, cancer, and respiratory illness. Family who chose to abstain at the risk of jobs and activities have all thrived medically and survived financially.

Covid exposed citizens to the overreach of government, and the devastating effects will be noticeable for generations who have subjected their immune system to pharmaceutical therapies labeled as vaccines. Our communities have either grown stronger in educating and engagement, or they have cowered in compliance and fear.

Only God controls infectious disease. No lab concocted virus can be contained by any paper mask or quarantine. The federal and state government response to a virus caused chaos and fear in a nation founded on biblical principles.

Shame on We the People.

I support repealing any authority to quarantine healthy individuals because the Secretary of Health should never have been granted the authority to control health freedom.

I support general supervision of the health of the people of the state, but not dictation of healthcare.

I am in support of legislation that returns health freedom and authority to we the people.

Thank you for representing conservative constituents who believe God is in control, government is just supervising and recommending.
