Dear Chairwoman Beverly Gossage and other members of the Committee,

Thank you for the opportunity to submit written testimony regarding SB 287, a bill to add developmental disabilities, including Autism Spectrum Disorder, to the Kansas silver alert plan.

The Autism Society of America is the nation's oldest and largest grassroots organization representing individuals on the Autism spectrum and their families. The Autism Society

envision a world where individuals and families living with Autism can maximize their quality of life, are treated with the highest level of dignity, and live in a society where their talents and skills are appreciated and valued. Along with our 70+ affiliates nationwide, we provide advocacy, education, information and referral, support, and community engagement opportunities at national, state, and local levels. Our Kansas affiliate, Autism Society- The Heartland has served Kansas since 2009 by offering grants and scholarships, information and referral services, educational workshops, social and support groups.

Senate Bill 287 amends the pre-existing Kansas silver alert plan to include vulnerable persons including those with a developmental disabilities, such as Autism Spectrum Disorder who are age 18 and up. Currently, the system works by establishing public notice that disseminates information regarding a missing elderly person who may have dementia. The public notice allows state-wide coordination with all relevant departments within the state to work together to find the missing elderly. It relies on working with local law enforcement, news media, and the public to provide information on the missing elderly with the goal of locating the person before serious harm.

Research shows that individuals with Autism tend to ‘wander’ similar to individuals with Alzheimer’s or Dementia<sup>1</sup>. The term "wander" is used to describe the act of moving without a specific destination or clear purpose, indicating a lack of self-awareness on the part of the person. The Centers for Disease Control and Prevention reports that one in 44 children have autism spectrum disorder and that more than half, or about 60%, were reported to wander<sup>2</sup>. Over a five-year period, a third of those with Autism who did wander ended up in harm's way and needed serious medical intervention or, sadly, died. This is often due to individuals being drawn to water or areas of high traffic<sup>3</sup>. Therefore, it is critical that individuals with Autism be included in the emergency response system.

Our research shows that 23 states have expanded their missing alert system to include people with Autism. States that have done so in the Midwest or Western region include [Iowa](#), [Texas](#), [Colorado](#), and [New Mexico](#).

We look forward to working with Kansas to make this necessary change. Thank you for considering the testimony of the Autism Society of America as this bill moves forward. If you have any questions, please contact Delancy Allred, State Policy Coordinator at [dallred@autism-society.org](mailto:dallred@autism-society.org).
