

TESTIMONY

HB 2262: This is testimony that I endorse HB 2262. I believe that this bill would promote data privacy and protect the collection of data with harmful surveys. According to Dr. Peg Luksik, this collection of data that is currently taking place is a horrendous invasion of personal freedom. Data bases are dangerous. It will control everything that happens to children. This data base collects information on income levels, ethnicity, religion, values, attitudes....all of which are private matters. This data base promotes government control of private matters. Therefore, we need to promote data privacy and protect the collections of data with harmful surveys. (Part of the Common Core Agenda is the collection of personal data through the auspices of bettering our education systems....this goes against our basic constitutional freedoms)

Respectfully submitted,

James Edwin Rosander and Lynda Sue Rosander
