To whom it may concern:

This letter is in support for having Kansas issuing Alzheimer's license plates. Alzheimer's is a vicious disease that affects the lives of that person, their family, and the community as a whole. Bill Freeman was a great mentor, coach, and father whose life was drastically affected by this disease. Pushing this initiative further can hopefully, help and assist families in the future as they deal and cope with this disease. We stand behind this, and look forward to having this initiative become a reality. Identification of people with Alzheimer's I feel can be one more way we help families and the community as we cope with this disease.
