

RE: Autumn Gordon

DOB: 11/30/2011

To Whom it May Concern,

Autumn Gordon has a sodium channel mutation causing her to have refractory epilepsy. She frequently has intractable seizures triggered by illness or fevers. Because of her SCN-1 mutation, she can't be treated with a number of antiepileptic medications. She is currently on 2 different medications, but has frequent breakthrough seizures. She has had several ICU stays due to her intractable seizures. As she is at risk for seizures precipitated by illness, her parents often keep her at home. I feel that medical marijuana would be an option to treat this child's epilepsy and would be willing to prescribe it for her provided that I was given proper dosing guidelines. If you have any questions, feel free to contact me at the above phone number.

Sincerely,

A handwritten signature in black ink that reads "Gretchen Black, DO".
