Safety Reviews: MCO Intervention

Member, 5 years old, on 20mg of olanzapine (Zyprexa) + other psychotropic meds

- No prior evaluation for ADHD or trial of stimulants.
- No psychosis. Psychiatric diagnosis of Mood Disorder.

Psychotropic medication utilization review (PMUR)

Outreach by health plan medical director

Adjustments in prescription

Goals with Behavioral Health Medications

- Maintain availability of anti-psychotics (APs) and other BH medications for members
- Preserve medication therapy for members who are stable
- Safety edits - Circumvent chronic use of multiple APs and use of APs among patients under 5 y/o
- Adherence and rapid response to FDA safety advisories

KS Medicaid

Atypical AP
Medication spending
as a percentage of
total drug spending
for each state
Medicaid program
during 2005 and the
first quarter of 2006.

2/10/2015

Long-Term Care

- 45.5% of Non-Dual (no Medicare) Long-Term Care members received an Antipsychotic medication in 2014
- 22,075 antipsychotic claims for 1,824 Members in 2014

Turnaround on PA

4Q 2014

- Medication prior authorization (PA) turnaround time for pharmacy claims was, on average, **4 hours**
- 100% of prior authorizations on the KanCare pharmacy benefit were responded to within 72 hours

SB123

The current behavioral health medication exemption is leaving room for unsafe practices:

- Children under the age of 5 are taking AP meds in place of safer alternatives, and utilization records show toddlers with dosage levels far outside the standard of care.
- In just 6 months' worth of data, Sunflower utilization records show more than 560 members were taking more than one antipsychotic for greater than 60 days.

If SB123 passes, Sunflower Health Plan will continue partnering with providers to ensure access and avoid any negative health outcomes.
