

Broadband availability in AT&T/CenturyLink Areas Fixed Connections 3 Mbps or Greater

Kansas Statewide Broadband Initiative

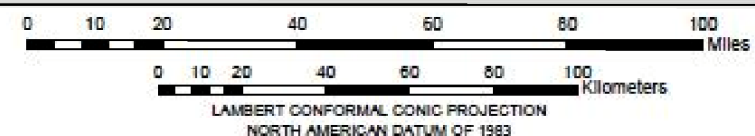

Definitions

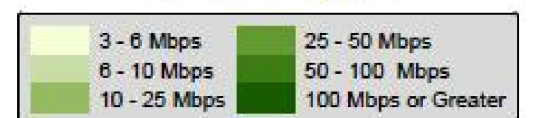

- Broadband** Data transmission technology that provides a two-way link to and from the Internet.
- Fixed Connections Include:**
- Wireline** Technology that enables service to a fixed location using copper, cable, or fiber lines.
 - Fixed Wireless** Technology that enables service to a fixed location using a dedicated frequency of the broadcast spectrum.

This map depicts residential and "business-only" service area.

Data has been mapped according to the National Broadband Map standard. Where wireline service is provided in a census block less than two square miles in area, the entire census block is included. Where wireline service is provided in a census block greater than two square miles in area, the service area is mapped by the road segment. Wireless service areas are submitted by the service provider, or estimated using Radio Frequency (RF) propagation modeling software. The Data Access and Support Center does not guarantee this map to be free from errors or inaccuracies and disclaims any responsibility or liability for interpretations made from the map or decisions based thereon.
