Re: HB 2601

Dear Education Committee Members,

My name is Megan Harding and I am a proponent to HB 2601. Each vaccine that is added to the list of requirements for students entering school is complex and requires an extensive review of research to determine if it truly is in the best interest for ALL students to receive this vaccine. Many vaccines should be looked at on a case by case basis with your child's physician. My children are not of school age yet, but when they do reach this age I want to know that the requirements for my children to attend school have been carefully reviewed and voted on. A vaccine is a big decision and should go through the proper channels as any other decision of this magnitude would.
