Re: HB 2601

Dear Education Committee Members,

I am unable to attend the hearing on 2-13-2020, however, medical freedom is important to me. Here are three succinct reasons why my family believes in medical freedom:

1. Vaccines are against my religious beliefs. Aborted babies and DNA and other objectionable ingredients are in vaccines, and I therefore will not inject them into myself or my children.
2. Vaccines are not tested by the gold standard in the science world: double-blind placebo. A placebo must be inert (saline solution, sugar pill) not another vaccine.
3. There are no safety studies on the current vaccine schedule. Vaccine companies have zero liability if you or I are injured.

I am Not okay with any more vaccines being added to the schedule. Please support Representative Heurbert's bill HB 2601.

Thank you for your consideration,

Michelle Kalgren
