Dear Education Committee Members,

Please support Representative Heubert's bill, HB 2601. I was vaccinated as a child from a mother who was taught to believe that there were no risk involved when receiving Vaccines. At a very young age I developed severe epilepsy having multiple episodes daily. I was forced to be homeschooled by 7th grade. The fact that on a Vaccine insert it tells you Epilepsy is side effect should mean they are not 100% safe. I suffered my whole childhood taking multiple medications having multiple test constantly ran... I am now 20 years old with a 8 month old daughter named Eloise. My husband and I chose not to Vaccinate because there is multiple risk involved. they told me that epilepsy is genetic but there has never been anyone in my family with it... My daughter is extremely healthy and happy and we deserve to choose what is Injected into her and what school she goes too no matter her Status of Vaccines. I was vaccine Injured and it should be my choice to choose what I choose for my daughter

Thank you,
Magdalene Kendrick
