Re: HB 2601

Dear Representative Steve Huebert,

I am a long time Kansas resident and I care about medical freedom. Where there is risk there must be choice! This saying is substantial for more health related decisions than just vaccinations! We should all have a choice in our health care; our preventative care, diagnostic measures and treatment courses. And if there were not risk there would be no need to have zero liability for the manufacturers and seventy-five cents of every vaccination go into the pot to pay out for injury! I absolutely think there should be recommendations by professionals but it should not be mandated. As a parent myself, I believe I should have decision making power for my children and be able seek sound medical advice from providers of my choice to make those decisions. We should always have in place the medical and religious exemptions. I fully support the the proposed legislation which will limit the power of KDHE to mandate additional vaccinations for children.

States that have overreached their government bounds and clenched on to people's freedoms have people leaving in droves! The state of Kansas needs to recognize that overreach and refuse to take those freedoms! We can be a haven state for people who value the freedom to choose to be empowered to make wise health choices! The state of Kansas must see the need this fulfills and opportunity it presents to bring people and revenue to the state.

This is just a snapshot of why me and my family are for HEALTH FREEDOM! We will stand up for health freedom for our generation and the generations yet to come! We are praying for a healthy and FREE state of Kansas!

Thank you for your time,

Katie Smith  
Olathe, Kansas
