Re: HB 2601

Dear Education Committee Members,

Hello and thank you for taking time to hear our story and give us the opportunity to share with our issues due to vaccines. In just a few quick sentences I'll give you mine and my two children's vaccine injury stories.

Mine: as a baby I received all my vaccines and as an adult I received 5. Flu, HPV, meningitis. I was a very happy active mother and after receiving each of those vaccines I found myself falling into a hole that I couldn't get out of. I started to have sensitivity to light and sounds and would get angry when too much was going on. I was diagnosed with depression and everyone I talked to refused to do any other testing. After my first set of HPV shots I went into a depression and could not force myself to live like how I used to. After the flu I started getting chronic headaches. After the meningitis I was claimed to have autism. I was on a spectrum. No one in my family has it I've never had any of these issues until now..after receiving these vaccines. I had brain swelling and doctors couldn't tell me why. They kept asking me if I had any head injuries or trauma....the simple answer was no I had vaccines and they were full of carcinogens that inflamed my brain and causing me to display symptoms of autism...as an adult! This is where we need to start questioning things.

My son: my happy baby boy was on top of all his milestones I always delayed shots because how I reacted. Everytime my son would receive a shot he would spend the next month waking up randomly in the middle of the night screaming a terror as if he's being murdered. The doctors couldn't explain it to me and refused to do any type of testing...from my son's very last vaccine he started to show signs of depression at 3 years old! He has so many health issues. He had to have tubes put in twice and tonsils removed. He suffers from depression at 4! And he has no reason to be depressed except the fact that he in fact had brain damage and it caused an abruption in his chemical makeup in his brain and put his dopamine out of wack.

My daughter: the same story goes with my daughter. She was a happy vibrant baby I spread out shots and continued to vaccinate because the mandates and because the doctors who could never give me answers told me to and I thought I could trust them. My daughter suffered from encephalitis but she did not go back to normal. She started having seizures so doctors were forced to do brain imaging and testing. She had reactions to vaccines and they were triggering seizures in her. All of these issues you see are not normal they do not run in our family and we have tested our living area to check for mercury and lead and there is none so it's not from her atmosphere at home. It was vaccines.

With these stories true stories I hope you will please consider to not allow forced mandates here in Kansas let us keep our exemptions and freedoms. As a mother I beg you please do research and realize vaccine injury is not rare. And know us parents are willing to go through hell and high waters to protect our children. It is our constitutional right and we will not comply and there will be a fight!

Thank you.
