Chairman Huebert,

My grandson was three days unresponsive in the hospital after vaccines at the age of only 14 months. He was a healthy robust child, growing, and happy and never sick the first 9 months of his unvaccinated life. At that point he started getting vaccines to go to Africa with his parents who had raised money to be missionaries there.

They abandoned the plan because the mission organization would not relent on the vaccines. He had to learn to walk again. He had to be watched 24/7 because he was so neurologically damaged. He is now 6 and we don't know if he is completely recovered. We don't know if he is growing at the rate he would have without the stall of vaccine injury.

What is the point of this madness? How does it help the world if a child dies? How does it help if parents have sick and dying children? How is it helpful that they have to spend time, money, and energy to bring them back to health? Or have to bury them. Many who survive never fully recover.

Why inject toxins into a healthy child when no one knows the risk factors, either of the illness or the vaccines, or how they will respond? Worse yet, far worse, is why MAKE anyone do it when there is no liability? That is tyranny. Nothing less than pure unadulterated tyranny. It is tyranny against our children and any person who is forced, including those whose jobs are at risk if they are noncompliant.

My grandson did not need this trauma. It was minus zero in benefit. Doctors are for the sick and injured. Leave the well alone. There are far better ways to maintain health than with injected drugs. All drugs have side effects. Injected ones are not exempt.

Thank you for introducing HB 2601. We need far more than this but your bravery in pushing against the constant flow of government overreach is laudable and I truly, truly appreciate it. God bless you.

For freedom and justice for all,

Connie Newcome
