Re: HB 2601

I am a firm believer in having choice over any medical procedure for yourself or your children. As a child I was extremely sick all the time. After receiving routine boosters for college, that I thought were required, I started experiencing severe, debilitating migraines, sensory issues, and developed extreme skin allergies to latex, rubber, and rubber accelerants. As a 20 year old I began struggling with sensitivity to noises, textures of food, and clothing, something I had never experienced before.

After doing extensive research I began detoxing myself and began living a toxin free lifestyle. I have never been more productive, happy and healthy. Had I had true informed consent and known I had a CHOICE in the medical decisions I was making for myself I would have weighed the risk vs benefit for those procedures and decided accordingly. After reading an insert and seeing the ingredients of a vaccine (animal DNA, antibiotics, aborted fetal cells, known carcinogens, known allergens, heavy metal, etc.) I have no doubt that those toxins created all of the issues I've spent years trying to reverse. More than ever before we have people living with chronic illnesses or issues to the point that these issues are being deemed normal – infertility, sensory issues, asthma, eczema, and the list goes on.

I fully support your legislation. Thank you!!
