Re: HB 2601

Dear Education Committee Members,

I suppose I should consider myself lucky that I didn't learn the hard way that vaccines are not only unnecessary but also cause irreversible damage. I've been researching vaccines for over 11 years, before I was pregnant with my first born child.

That said, I have many personal friends who aren't so lucky. One friend lost their only daughter, at 6 weeks only within 12 hours of her scheduled vaccines. Another friend lost her daughter at 6 months, again within hours of routine vaccines. It's utterly heartbreaking and they will never again get to hold their babies, or comfort their cries, share in their laughs.

Vaccines are not necessary for health, individually or public. Please do not allow media propaganda and other misinformation to sway you into voting wrong.

Prayers be with you for a clear conscience.
