*In support of SB 212*

Chairman Hilderbrand and Members of the Senate Public Health and Welfare Committee,

Please support SB212 and do not allow KDHE to add the Flu, HPV and Covid19 vaccines to the required schedule for kids. It should be the choice of parents what is given to their children. They are already given so many vaccines. Studies that are censored show that children who are not vaccinated or receive substantially fewer are much healthier- their immune systems are allowed to work the way they were designed.

Please, please, please do not allow more to be added especially for illnesses that do not affect most kids.

Thank you for your consideration,  
Becky Palmer
