In support of SB 212

Dear Chairman Hilderbrand and Senate Public Health and Welfare Committee Members

I strongly urge you all to support SB 212 to reduce the undue influence of the pharmaceutical lobby's power over one decision maker. By giving the decision-making authority to the legislators will provide an extra layer against the possibility of bribes and other financial incentives. Plus consider the following from the article *New survey of vaccine-free group exposes long-term impact of vaccination policies on public health* by Greg Glaser and Pat O'Connell:

*"The national Vaccine Adverse Events Reporting System (VAERS) captures fewer than 1% of all vaccine reactions and deaths according to the government's own study by Harvard Pilgrim Health Care. In other words, the system misses more than 99% of harms caused by vaccines. That means any statistics showing the number of adverse reactions must be multiplied by 100 for a reasonably accurate estimate."*

*"Vaccinated kids are 3.5 times more likely to have one chronic illness and 5.7 times more likely to have multiple chronic conditions."*

*"That means more family disruption, more medication and doctor visits, more expenses, and more risk from complications of infectious diseases like covid-19."*

*"To bring this message home, The Control Group's statistical analysis of national health data shows a "very high correlation" between the increases in children's health problems and the increases in vaccination since 1994."*

For more information on this study see <https://www.thecontrolgroup.org/>

Sincerely,

Mark Gallegos

St. Marys, Pottawatomie County, KS. Senate District 18
