RE: In support of SB 212

Chairman Hilderbrand and Senate Public Health and Welfare Committee Members -

Our children are already required to take too many vaccinations in order to receive public education, including education online from accredited programs such as Connections Academy. Our children do NOT need to be forced to take the HPV vaccine, because in many other countries, it has later made those whom received it infertile! These children also do NOT need to be forced to take ANY of the COVID-19 vaccines, as they are only in their first stages of trial reviews; if we're being honest, everyone who's receiving these vaccinations are glorified guinea pigs because the research and actual results of their affects won't be known for years to come, and who wants their child to be forced to be a human guinea pig?!?

PLEASE do the right thing, for our children, this generation, and the the leaders of tomorrow by voting in support of SB 212 so there is no more additional required vaccinations!

Thank you!

Sincerely,

Starla Burnum
