

Hi my name is Dan Ring. I live in Marshall county. Last summer Irish Creek Wind Farm put up wind turbines. The closest one to our property line is less than 500 yards. We did not sign an agreement to have any wind turbines put on our land. But other people did right next to us. Not only have they ruined the beautiful landscape but the noise coming off of them is crazy. The shadows flickering drives you crazy. We did not agree to this but we have to endure all the negative side effects from them. If it was to fall over it would cross our fence line. Now we run cattle there. What are we to do if it were to fall on our cattle. How will it be cleaned up how will we be treated or our land. Not to mention the wildlife that has left because of the noise. A mile away you can hear the humming and whooshing sound. We have to suffer the actions of this so called green energy that we will never even see. Now I could take you around and show you all the bad things about these wind turbines cause they are all around us now. Or you could take people out and show them. Something has to be done. I hope SB353 passes. The damage has already been done. Thank you I hope something gets done about this.
