

2021 Kansas Statutes

82a-1605. State participation in class II multipurpose small lake project; general plan required; duties of water office; duties of sponsor; costs; sale of water rights. (a) The state may participate with a sponsor in the development, construction or renovation of a class II multipurpose small lake project if the sponsor has a general plan which has been submitted to and approved by the chief engineer in the manner provided by K.S.A. 24-1213 and 24-1214, and amendments thereto. If the Kansas water office determines that additional public water supply storage shall be needed in that area of the state within 20 years from the time such project is to be completed and a water user is not available to finance public water supply storage, the state may include future use public water supply storage in the project. The Kansas water office shall apply for a water appropriation right sufficient to insure a dependable yield from public water supply storage. The Kansas water office shall be exempt from all applicable fees imposed pursuant to K.S.A. 82a-701 et seq., and amendments thereto, for such applications. The Kansas water office shall have authority to adopt rules and regulations relative to the inclusion of public water supply storage in proposed projects under this act and the disposition of state-owned water rights and associated public water supply storage space in such projects.

(b) In a class II project, the state may assume initial financial obligations for public water supply storage in watersheds by entering into long-term contracts with the federal government. In order to provide security to the federal government, the state may grant assignments of water rights, either appropriation rights or water reservation rights; assignments of rights under existing or prospective water purchase contracts; assignments, mortgages or other transfers of interests in real property held by the state and devoted to the specific small lake project for which security is sought; or may provide other security that is permissible under state law and acceptable by the federal government. Instead of contracting to repay costs under long-term contracts, the state may pay all of the required costs of the public water supply storage in a lump sum.

(c) The sponsor of such class II project shall be responsible for acquiring land rights and for the costs of operation and maintenance of such project. The state or federal government may provide up to 50% of the engineering and construction costs and up to 50% of the costs of land rights associated with recreation features. Subject to the provisions of subsection (d), the state may pay up to 100% of the engineering and construction costs of flood control and public water supply storage. All other costs of such project, including land, construction, operation and maintenance shall be paid by the sponsor.

(d) The state shall not participate in the costs of public water supply storage in a renovation project unless the Kansas water office determines that renovation is the most cost effective alternative for such storage. The state shall be authorized to pay only up to 50% of the engineering and construction costs of public water supply storage in such a renovation project.

(e) The Kansas water office may recover the state's costs incurred in providing public water supply storage in such class II project, and interest on such costs, by selling such storage and the associated water rights. Interest on such costs shall be computed at a rate per annum equal to the average of the monthly net earnings rate for the pooled money investment portfolio for the preceding calendar year for each year of storage.
