House Committee on Local Government

Subject: HB2268 - Prohibiting certain restrictions of residential solar energy devices.

I urge the Committee to support and grant homeowners through this bill, the right to add solar energy collectors to their homes. The long term economy and resilience solar can provide a homeowners family should not be prohibited by an HOA. Additionally solar equipped homes often ease the burden on the energy grid during high demand periods benefitting all electric users and the environment.

Thank you,  
Darrel Hart
