Senate Public Health & Welfare Committee

Proponent SB 391

Please consider this to be notice of my intent to testify in personam for SB 391, "The Constitutional Right To Health Freedom Act". My testimony as follows:

I'm a nurse and a lawyer, but as I stated in testimony previously one need not be either to demand the right to make one's own health care decisions w/o fear of firing, and so-called "doxing and cancelling". These are coercive measures and Americans don't do well with those!

Also a blind man can see that the only reasons these measures are employed is to force rational people to act irrationally, to wit, continue to get "the jab" when its horrific side effects are immediately clear; then to force knowledgeable good doctors not to order medications such as ivermectin when its efficacy v Covid is breathtaking. MDs must always be permitted to do what they do best: Use their extensive study and practice TO order "off label" usage of meds like ivermectin, unmolested by administrators who know nothing and care less about pts., health, medicine or nursing. We're Americans. We're not serfs. The very fact that we must now pass such bills as this, sounds the alarm. Thus we are determined to pass it-no matter how hard the [completely misnamed ] "Board of Healing Arts" tries to ruin the majority of good doctors by taking their licenses and consolidating their own bureaucratic power. I close with the wish that Sen. O'Shea will vote as she ran on this Bill (and many others), and not with the non-Hippocratic-Oath observing medical "special interests" so ubiquitous these days.

Kathy Brown, Esq.
